0.5mm Thick VS Thin

Unlike conventional veneer, Richwood hi-Tech veneer is 0.5 mm thick. The thicker the veneer, the better quality one can achieve in sanding and surface furnishing, which will result in a richer and more natural look of the finished products.

Disclaimer

Photos shown on the brochure and CD are taken based on unfinished panels. The actual color, before and after finishing may be different. The sample and photo submitted is to show the colors and patterns of the veneers. As these are man-made color and patterns, the actual colors and patterns, before and/or after finishing, may differ from batch to batch of production. The color may fade over time. Furthermore, Richwood Hi-Tech veneers are for internal and dry application only. Exposure to sunlight, humidity, water and any undesirable elements, may cause changes in color or delamination or certain reactions of the veneers.
